Check for compatible PC apps or alternatives or follow the guide below to use on PC: If you want to install and use the RFS - Real Flight Simulator app on your PC or Mac, you'll need to download and install a desktop application emulator for your computer. We work diligently to help you understand how to use this app for your computer in 4 simple steps below: Ok. First things first. If you want to use the app on your computer, first visit the Mac store or Windows AppStore and look for the Bluestacks app or the Nox App >> . Most tutorials on the web recommend the Bluestacks app and I might be tempted to recommend it too because you are more likely to easily find solutions online if you have problems using the Bluestacks app on your computer. You can download the Bluestacks app or Mac software Here >> . Step 2: Install the emulator on your PC or Mac Now that you have downloaded the emulator of your choice, go to the Downloads folder on your computer to locate the emulator or Bluestacks application. Once you find it, click it to install the app or exe on your PC or Mac computer. Now click Follow to accept the license agreement. Follow the on-screen policies to install the app correctly. If you do the above correctly, the Emulator application will be successfully installed. Step 3: For PC - Windows 7/8/ 8.1 / 10 Now, open the Emulator app you installed and search for your search bar. Once you have found it, type RFS - Real Flight Simulator in the search bar and press Search. Click RFS - Real flight simulator application icon. An RFS - Real Flight Simulator window in the Play Store or app store will open and display the Store in your emulator app. Now press the Install button and as on an iPhone or Android device, your app will start downloading. Now we're all finished. You'll see an icon called All Apps. Click on it and it will take you to a page containing all your installed applications. You should see the icon. Click on it and start using the app. Step 4: for Mac OS Hi. Mac user! The steps to use RFS - Real Flight Simulator for Mac are just like those of the Windows Operating System above. All you need to do is install Nox Application Emulator or Bluestack on your Macintosh. Links are provided in step one RFS - Real Flight Simulator In iTunes Download Developer Rating Score Current Version Adult \$0.99 On iTunes RORTOS SRL 3182 4.56724 1.0.9 4+ Thanks for reading this tutorial. Have a nice day! RFS - Real flight simulator software features and description live a unique unique experience anywhere in the world and exploring scenarios and airports in high resolution with satellite maps, 3D buildings, runways, procedures and air traffic. Jump aboard flights in real time, chat with other pilots, and join them in multiplayer. Manage flight plans and interact with ATC controllers. Get access to thousands of community-created liveries, customize all planes, their meters, crashes and weather conditions. Become a real pilot! I thought I'd give rfs a chance, so I flew some flights from LAX and SFO. I like the interface, not as fluid as I'd like it to be. I didn't see the acceleration while I was going to take off, it wasn't there, it seems. Perhaps a higher motor roar and faster visual would make a difference. The Flight Planner is wonderful, shows a list of runways at an airport, however, I was not able to enlarge an airport to choose an individual runway or see the layout of the airfield. On my flight to John Wayne from LAX, I felt like I wasn't climbing fast enough. Upon arriving, there were no taxiways from the track to the terminals. The SFO flight to KOAK was even worse, I bumped into RWY12 and when I landed, parts of the runway were missing. I understand that RFS has been recently launched and there are many improvements to be made, and will be made. One would be to build a virtual community where members can help fix airports using google map or help with graphics on aircraft. Other than that, I see that this SIM will improve over time, as it has some of the missing features in IF (available for longer) like night landing lights, buildings, snow and some. Thumbs up for the team. Crashing By ☺☺☺☺☺ (Pcmac user) chose to play this game and pick up the pro because it is cheaper than infinite flight pro, but I have had a problem with the online professional. Almost every time I pressed the map button or I just hit it a few times it always takes me out of the game and does not save what I did so I have to restart again. It's very frustrating and I hope future updates fix this, but I prefer this instead of infinite flight because of the price and also you have 3D animation airports, you get an animation for the pushback gate, you get an animation for pushback, and you still have traffic control it's a very big online experience. it's a very frustrating failure and I hope future updates fix this, but I prefer this over the infinite flight because of the price and also you have 3D airports you get an animation for the pushback gate you get gets animation to pushback you get air traffic control. Overall, the game is a great game. Tremendous potential... not yet there By SeanDog88 (Pcmac user) I am a professional subscriber, and there are many positive things to the game. The weather and the 3D buildings are great. But physics is still a little off. Planes come very fast when they land. The impulse levers should not be idle when in the final. And yes, I have the correct patchwork set, gear down etc. I like the general controls, but adjustments need to be made. In addition, cockpits need to be more realistic. This is definitely a possible feature that needs to be fixed. The flight planning system can be useful, except often that the altitudes are wrong. For example, flying from lax to San Diego, They gave me 4,000 feet as my cruise. Definitely not high enough. I don't expect fl 350 on a short flight, but I expect more realism in that regard. I keep checking back almost every day to keep up with the updates. This game has a lot to offer, but still far behind infinite flight in terms of realism. I hope the RFS has a bright future, but it hasn't gotten there yet. Excellent Game By nobletravis (pcmac user) The game is very good, graphics are perfect, game style is perfect. But there are a few things I'd like to suggest. For example, the cockpit is a bit dark, it would be better if it was brighter. The textures are good, but the lighting could be improved. The sound effects are decent, but the voice acting could be better. The flight controls are responsive, but they could be more precise. The overall game play is fun, but it could be more challenging. The graphics are good, but they could be more detailed. The textures are good, but they could be more realistic. The sound effects are good, but they could be more immersive. The flight controls are good, but they could be more accurate. The overall game play is good, but it could be more engaging. The graphics are good, but they could be more detailed. The textures are good, but they could be more realistic. The sound effects are good, but they could be more immersive. The flight controls are good, but they could be more accurate. The overall game play is good, but it could be more engaging. The graphics are good, but they could be more detailed. The textures are good, but they could be more realistic. The sound effects are good, but they could be more immersive. The flight controls are good, but they could be more accurate. The overall game play is good, but it could be more engaging. The graphics are good, but they could be more detailed. The textures are good, but they could be more realistic. The sound effects are good, but they could be more immersive. The graphics

example, when we press the seat belt button, we should be able to hear the flight attendant talking like, for example, should say Dear Passengers the captain has turned on the seat belt light please remember seated and get stuck once the captain unplugs it, then you can board your seat belt and free wander around the cabin as much as you would like. The other thing you think would be good is that when you are at a gate picking up passengers the plane should automatically add the passenger. We should not have to hit the pause button and then add passenger should automatically add when they enter the plane. Another, then, that's a perfect game. Game.
